It provides needed analysis of the larger causes behind the immediate causes of illness and epidemics, particularly injustice, systemic inequities, and the cumulative effect of compound disadvantages. This moral approach to collective and individual responsibilities—on the part of practitioners as well as the public—supports a [...]

Modified Inferior Turbinoplasty**A new surgical approach**

Humans can resist 40 days without eating and 4 days without drinking, but only 4 minutes without breathing: this tells us much about its fundamental importance. Breathed air is slowed down, filtered, warmed and humidified by the nose; many mechanisms are involved in this act, which prevent bronchial tubes and pulmonary alveolus from receiving an excessive and sudden air load. It is well known, on the other hand, that breathing through the mouth causes a lot of problems: inflammatory diseases [...]

Textbook of Neuromodulation

Principles, Methods and Clinical Applications

Until recently, it was thought that the adult brain is modifiable only during early stages of ontogenesis. Neuroplasticity reflects the ability of the human brain to alter the pattern of neural activation in response to previous experience, and recent findings indicate that the effects of experience can lead to both [...]

Radiology for PET/CT Reporting

Reading PET/CT scans is sometimes challenging. Not infrequently, abnormal findings on CT images are functionally silent and therefore difficult for nuclear medicine practitioners to interpret. Furthermore, in general only a low-dose CT scan is produced as part of the combined PET/CT study, and the resulting CT images may prove suboptimal for image interpretation. This atlas is designed to enable nuclear medicine practitioners who routinely read PET/CT scans to recognize the most common CT [...]

Illustrated Anatomical Segmentectomy for Lung Cancer

Advances in CT have enabled us to detect small lung cancers, which has changed the lung cancer surgery from lobectomy to a lesser lobar resection such as a segmentectomy or wedge resection. While wedge resection is a simple procedure, it has a higher risk of local recurrence of cancer than a lobectomy. On the other hand, segmentectomy is a well known curative surgery for small lung cancers. However, it is difficult to perform accurately because of its anatomical complexity, which makes [...]

The Broca-Wernicke Doctrine

A Historical and Clinical Perspective on Localization of Language Functions

This book discusses theories that link functions to specific anatomical brain regions. The best known of these are the Broca and Wernicke regions, and these have become synonyms for the location of productive and receptive language functions respectively. This Broca-Wernicke model has proved to be such a powerful concept that it remains the predominant view in modern clinical practice. What is fascinating, however, is that there is little evidence for this strictly localist view on language [...]
